OBJECTIVE

Computer Science student seeking a remote, part-time software engineering role building production applications, with experience in backend systems, data pipelines, and LLM integration.

SKILLS

Languages: Java, Python, C, C++, TypeScript, JavaScript

Data Science: NumPy, Pandas, Matplotlib

Tech: Git, GitHub, GitLab, REST APIs, Linux, Docker/Podman, PostgreSQL/SQL, MinIO, Azure, Claude API, Deepgram, InfluxDB, ArgoCD

EDUCATION

Bachelor of Science (Computer Science), University of Mary Washington (May 2027 Candidate)

Dean's List: Spring 2025

Minor: Data Science

Relevant Coursework: Applications of Databases, Data Structures & Algorithms, Computer Systems and Architecture

WORK EXPERIENCE

Software Engineer Intern | HawkEye 360 | Herndon, VA

May 2026 - Aug 2026

Designed and built a power simulation system for HawkEye 360's satellite scheduler, modeling spacecraft energy budgets across eclipses, data collections, and downlinks so the scheduler could not produce plans that violated power limits. Partnered with hardware and payload teams to validate the underlying model. Built a battery state-of-charge algorithm for satellites in orbit, combining voltage-based anchor points with current integration over live telemetry, plus long-term degradation tracking so reported charge reflects true usable capacity rather than original capacity.

PROJECTS

Unimarket | TypeScript, Java, MinIO, PostgreSQL (*In progress*)

Co-developing a mobile marketplace app for college students to buy and sell items. Built listing creation with multi-image upload (up to 4 per listing), using MinIO for S3-compatible object storage and PostgreSQL for relational data. Next: real-time buyer-seller chat over WebSockets and push notifications.

Voice AI Assistant | Python, Claude API, Deepgram

Built an always-listening voice assistant that activates on a custom wake word and streams audio through a real-time pipeline: speech-to-text transcription, response generation with Claude Haiku, and text-to-speech playback. Designed the program to manage the lifecycle of each streaming connection, opening it on activation and closing it when the response finishes. Currently adding scheduled morning briefings using LLM tool calls to pull weather, Google Calendar events, and Canvas assignment deadlines.

EXTRACURRICULAR ACTIVITIES

Placed 2nd in the 2025 annual Mary Washington Programming Competition

Treasurer of the Ultimate Frisbee Club

Member of the Cybersecurity Club
